

Practical 7

Step 1: Create a database and name it users and add two columns namely user_id and password.

Step 2: Insert few records.

Step 3: Go to Users Account And grant all privileges to user root@localhost.

And then Create the following files in Php.

Login.php

```
<html>
<head>
<title>Login Form</title>
</head>
<body>
  <form method="post" action="validate.php" >
    <table border="1" >
      <tr>
        <td><label for="user_id">User_ID</label></td>
        <td><input type="text"
          name="user_id" id="user_id"></td>
      </tr>
      <tr>
        <td><label for="users_pass">Password</label></td>
        <td><input name="users_pass"
          type="password" id="users_pass"></input></td>
      </tr>
    </table>
  </form>
</body>
</html>
```

```
<tr>
    <td><input type="submit" value="Submit"/>
    <td><input type="reset" value="Reset"/>
</tr>
</table>
</form>
</body>
</html>
```

Validate.php

```
<?php
// Grab User submitted information
$id = trim($_POST["user_id"]);
$pass = trim($_POST["users_pass"]);
//$id="geeta";
//$pass="arneja";
// Connect to the database
$conn=mysqli_connect("localhost","root","");
// Select the database to use
mysqli_select_db($conn,"enquiry");
$query = "SELECT * FROM users WHERE user_id = ".$id." AND password = ".$pass."";
$result = mysqli_query($conn,$query);
echo mysqli_num_rows($result);
if(mysqli_num_rows($result)==1)
{
```

```
    echo "You are a validated user.";
}
else {
    echo "Sorry, your credentials are not valid, Please try again.";
}
?>
```
